

HP ZBook 15 SSD Cache Replacement

This guide will demonstrate how to take the solid state cache out of the laptop.

Written By: Grant Terris

INTRODUCTION

Solid state drives are much faster than hard disk drives, but are much more expensive. The ZBook 15 comes with a small solid state storage unit called a cache. If you want your computer to run faster, you can move your operating system from the disk drive to the solid state cache. This will greatly decrease the amount of time it takes for your computer to boot from its powered-down or sleep states. If you need to replace the solid state cache on your laptop, follow this guide!

TOOLS:

- [Phillips #0 Screwdriver](#) (1)
-

Step 1 — Battery

- Flip the laptop over.
- Slide the lever with the battery symbol beside it firmly until the battery pops out.
- Remove the battery from the laptop.

Step 2 — Back Cover

- Slide the right lever firmly to the right.
- Slide the cover towards yourself to remove it.

Step 3 — SSD Cache

- Remove the two 3 mm screws with a Phillips #0 screwdriver.
- Remove the Solid State Cache by pulling the module up and out.

To reassemble your device, follow these instructions in reverse order.
